ALTERATION

WHO ARE WE?

We are a team of individuals part of LEGEND HAS IT studios who want to develop an NFT game that changes the scope for NFTs. We want to provide the player with an optimal experience while allowing them to earn money.

Our goal is to make an enjoyable game that will entice players to stay and return for more. We achieve this by having unique ecosystems, gameplay, and an engaging story line, all of which evolve with the Alteration project.

We developed Alteration keeping our consumers in mind. The result of that is a fully fledged game with multiple playing dynamics, challenging scenarios that have unique rewards for our players, as well as many unique ways to obtain in-game NFTs. Our players are given freedom as to how they choose to use their hard earned NFTs.

HOW DOES THE GAME WORK?

We are developing a strategic, turn-based, open world RPG which implements cyberpunk themes, in a game which has high stakes and high rewards for the players. Alteration will also follow different mythologies as the game evolves and expands giving players something fresh to experience as time goes on. In addition to this, we also have highly customizable characters which ensure replayability of the game. Alteration is given its aesthetic touch with the use of 2D designs in a 3D world.

Alteration is a Play-to-Earn game in which the player can buy, sell, trade, and stake in the marketplace with NFTs. These NFTs are earned in various ways, some of which include, player versus player battles, Mines, and purchasing NFTs. The diverse range of NFTs a player can get include weapons, armors, character body modifications, and game characters among other things.

Players can create their own NFTs using the crafting system to create upgradeable parts, weapons, armor and more. Players can also buy NFT assets, such as Mines and Apartments.
